

SOLUTION FILE 3: INTEGRATED INCIDENT WORKFLOW & TESTING SOLUTION

Project Title: Implement Client Script & UI Policy (Incident)

1. Solution Overview

This solution integrates both UI Policies and Client Scripts into a cohesive, end-to-end incident management workflow, backed by a rigorous testing framework to ensure robust system performance and data accuracy.

2. Implementation Strategy & Workflow Execution

- **Unified Pipeline:**
 1. Form loads (onLoad script active).
 2. User selects options, triggering dynamic UI Policies to show/hide fields.
 3. User modifies inputs, triggering onChange scripts for validation.
 4. User attempts to save/submit, triggering onSubmit rules.
- **Testing and Verification Framework:**
 - *Mandatory Enforcement Tests:* Verifying that forms cannot be saved without required fields.
 - *Reverse Condition Tests:* Ensuring that when conditions change back, fields correctly hide or become optional.
 - *List-Edit & Form-Based Updates:* Testing that bulk edits and direct form updates respect the implemented scripts and policies.

3. Benefits of Solution 3

- Guarantees 100% compliance with IT Service Management (ITSM) data standards.
- Ensures a smooth, predictable, and error-free ticket escalation path for IT support teams.
