

PROJECT TITLE: IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT)

4. TECHNOLOGY TRACK (Requirement Analysis)

4.1 Technology Stack Overview

To successfully implement this Naan Mudhalvan project, our team utilizes a combination of cloud-based enterprise platforms and web technologies:

- **Primary Platform:**
 - **ServiceNow Developer Instance (Utah / Washington / Vancouver Release):** Cloud-based ITSM platform used for building, testing, and deploying application logic.
- **Scripting Languages:**
 - **JavaScript (ECMAScript):** Used for writing custom Client Scripts (onChange, onLoad, onSubmit).
 - **GlideForm API (g_form):** ServiceNow-specific client-side API used to customize form behavior, check field values, and control visibility.
 - **GlideUser API (g_user):** Used to retrieve information about the currently logged-in user.
- **Configuration Tools:**
 - **UI Policy Builder:** No-code/Low-code interface in ServiceNow for setting condition-based rules, field visibility, and mandatory requirements.
- **Documentation & Version Control:**
 - **GitHub:** For storing project phases, documentation files (Word/PDF), and source code records.
 - **Microsoft Word / PDF Converters:** For generating clean formatted reports following academic and project guidelines.
